Allowable Subject Matter

2. **Claims 24-35 and 47-65** are allowed.
3. **Claims 24-35 and 47-65** are renumbered.
4. The following is an examiner's statement of reasons for allowance:

Regarding claims 24-35, 51-56 and 58, none of the prior art of record teaches or suggests that the circuitry includes instructions for evaluating a variability characteristic of the received signal and for simultaneously altering both the sample rate and the number of samples and including a timer for determining when the sample rate is to be altered again, in combination with the rest of the claim limitations.

Regarding claims 47-50 and 57, none of the prior art of record teaches or suggests that the executable instructions include instructions for comparing the averaged sensor output value to a representation of the average noise parameter, and responsive thereto, including further instructions for altering a sample rate parameter and for altering the number of signal samples used averaging the sensor's output, in combination with the rest of the claim limitations.

Regarding claims 59-65, none of the prior art of record teaches or suggests control circuitry coupled to at least the input, the circuitry including first software that samples a received signal at a first rate, forming an averaged signal based on a first number of samples, and second software that evaluates variability of the received signal and simultaneously alters both the sample rate and number of samples in response thereto, in combination with the rest of the claim limitations.
